OFFICE HOURS · LIVE BUILD

Which accounts should we contact next, and why?

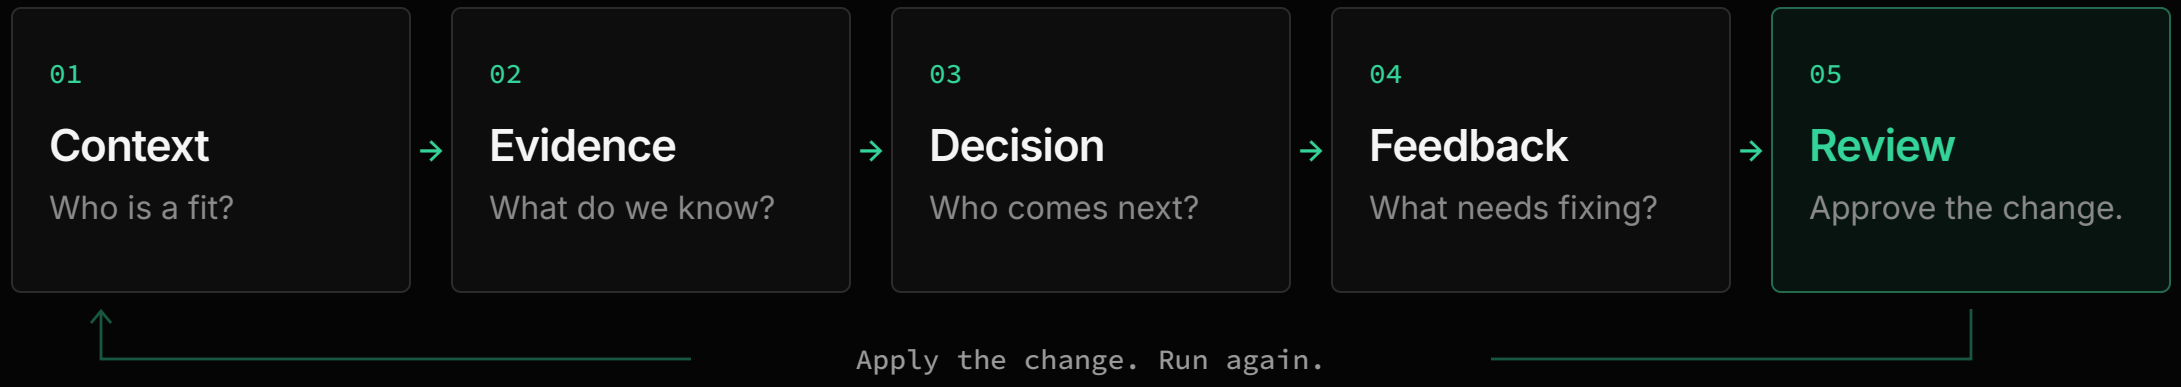

Five accounts. One play. One reviewed correction.

Context → Evidence → Decision → Feedback

THE TAKEAWAY

Your context. Your judgment.

A system you can inspect, correct and run again.

Which decision would you start with?

QUESTIONS & DISCUSSION

Cargo

SCREENSHOT THIS PROMPT

Try it with your accounts.

Open a new folder in Claude Code, Cursor or Codex. Paste this:

Help me build a Cargo workflow: which accounts should we contact next, and why?

Set up Cargo using https://api.getcargo.io/INSTALL.md and confirm my workspace.

Ask who we target, who we exclude and which buying signal matters. Save this as context and explicit rules.

Use five accounts I provide. Build one manually run play. Store a priority, an evidence-backed reason and a suggested next step. Flag missing targeting facts.

Show the plan and estimated cost before I approve deployment and execution. Use the supplied data for this exercise.

Let me correct one result. Diagnose the cause, propose a small change, wait for my approval, then rerun and compare.

FIVE ACCOUNTS. ONE PLAY. ONE REVIEWED CORRECTION.
